# Highly flexible Stromag Periflex® VN Disc Coupling

## Series overview: Stromag Periflex® Disc Couplings

**Periflex® VN / -VP...G Series**  
Nominal torque range 160 – 63,000 Nm

**Periflex® VN / -VP...R Series; radial installations**  
Nominal torque range 160 – 63,000 Nm

**Periflex® VN / -VP ...G/ON Series**  
Nominal torque range 160 – 63,000 Nm

**Periflex® VN / -VP...GB Series with antirotation stop**  
Nominal torque range 160 – 63,000 Nm

**Periflex® VN...S Series**  
Nominal torque range 160 – 8000 Nm

**Periflex® VN / -VP...W Series; shaft coupling**  
Nominal torque range 160 – 63,000 Nm

# Highly flexible Stromag Periflex® VN Disc Coupling

## The Stromag Periflex® Disc Coupling concept

Stromag Periflex® VN couplings are highly flexible elastomer couplings with linear spring characteristics ideal for diesel engine drives.

The Series covers the torque range 160 – 63,000 Nm. The external companion dimensions conform as standard to the flywheel connections under the SAE standard J620. The larger couplings are basically designed with metric flywheel connections.

Stromag Periflex® VN coupling allows fast and simple connection of a flange, specifically a flywheel, to a shaft. Some designs also allow the connection of two shafts.

Stromag Periflex® VN coupling is a coupling that features an axial plug-in connection for easy installation and removal, for both the entire coupling and the flexible element.

At the fully intermeshing teeth on the connection ring, the disc tire can be displaced along its axis by several millimetres when no torque is applied.

Each Stromag Periflex® VN size comes with a range of elastomer qualities and torsional spring stiffnesses. These allow precise configurations for drives susceptible to torsional vibrations.

### Application fields

Stromag Periflex® VN couplings are designed for use on piston engines. The connection ring can be bolted directly to the flywheel of an engine or compressor.

Its axial plug-in design presents particular advantages e.g. for installations under bell covers.

Other application fields are electrical assemblies, compressors, construction machinery, engine and ship-building and general machinery.

# Highly flexible Stromag Periflex® VN Disc Coupling

## Instructions for the designer

The Stromag Periflex® VN coupling hubs are made of steel or ductile cast iron. The connection ring is made of aluminium. The disc tires consist of a steel or ductile cast iron angular ring with a volume of vulcanized elastomer. The variants of natural rubber (NR) can be used at temperatures of -50°C to +80°C.

The variants of temperature resistant material (ECO) can be used at temperatures of -40°C to +120°C. In addition, ECO is resistant to ozone and oil.

Damping work may cause the flexible element to reach temperatures higher than ambient. This must be considered when the coupling is to be fitted with a guard or cowl, and adequate ventilation and heat dissipation must be provided.

The Stromag Periflex® VN coupling can be delivered with EN 10204 acceptance as defined in the classification societies rules.

The coupling complies with the requirements under API 671 with consideration to our list of deviations TM 800.0010.

This list of deviations is available from the Stromag GmbH departments.

### Use in potentially explosive environments

The coupling conforms to the requirements under Directive 2014/34/EU and can be used as follows:

- a. Zone 1 (gas, Category 2G) in Groups IIA, IIB, and IIC, T4
- b. Zone 2 (gas, Category 3G) in Groups IIA, IIB, and IIC, T4
- c. Zone 22 (dust, Category 3D) for dusts with a minimum ignition energy > 3 mJ, T 125 °C

The Stromag Periflex® VN coupling compliance with the requirements for each of these zones / categories is documented in the form of the following codes on our products:

#### Use in gas atmospheres:

 II 2G c T4

#### Use in dust atmospheres:

 II 3D c 125 °C

Use in potentially explosive environments must be based on the request form annexed to this catalogue.

## Classification rules

The acceptance of a coupling by a classification society must observe the rules issued by this society. Under certain circumstances, the coupling characteristics may differ from the definitions provided in this catalogue. Prepared data sheets are available on request. A number of classification societies prescribe fail-safe devices on ships main drives.

# Highly flexible Stromag Periflex® VN Disc Coupling

## Fail-safe device

The Stromag Periflex® VN coupling is available with an fail-safe device. A rupture in the flexible element causes claws to intermesh, forming a torsionally rigid, backlash connection between the drive and output sides. Temporary emergency operation is possible with limited torque. The permissible torques and speeds must be calculated separately on the basis of torsional vibrations transferred via a torsionally rigid structure.

## Instructions on choosing the coupling size

The static and dynamic characteristics of Stromag Periflex® VN couplings are available. These can help to choose the suitable coupling size for the specific application. The key factors are the loads induced by the transferred power and torsional vibrations. Stationary operating modes must be based on  $T_{KN}$ ,  $T_{KW}$ , and  $P_{KV}$ , nonstationary operating modes on the  $T_{Kmax}$  values.

Stromag GmbH departments can provide support, specifically in calculating the torsional vibrations. We therefore ask you to complete and send us the question sheet annexed to this catalogue.

As a rule, flexible couplings are a safety feature in the form of a predetermined breaking point on a drive train. Hence, overloading a drive train generally leads to failure of the flexible coupling element. This behaviour is intentional and protects the entire system from unforeseen damage. Any consequential damage arising from this safety function of the coupling must be considered in advance by the system designer and monitored or eliminated with suitable measures.

# Highly flexible Stromag Periflex® VN Disc Coupling

## Installation instructions and scope of delivery

The Stromag Periflex® VN coupling is fitted with a connection ring (1) that allows it to be bolted directly to the engine's flywheel. The hub (3) of the disc tire (2) is secured to the machine with bolts (4).

The drive and output sides are moved together to the prescribed distance (maybe blind installation), in this situation the tire's teeth must engage over the entire length of the connection ring.

The maximum displacements can be taken from the dimensions and ratings tables.

### Delivery of the standard version includes:

- 1 = connection ring
- 2 = disc tire
- 3 = hub
- 4 = bolts

## Storing flexible rubber elements

When stored properly, flexible rubber elements retain their properties over several years. It is essential here that the stored parts are protected against oxygen, ozone, light, heat, moisture, and solvents. Solvents, fuels, lubricants, chemicals, acids, disinfectants, and similar may not be stored in the same room. The storage temperature should not be lower than +10°C and not higher than +25°C.

All UV light sources are harmful and must be avoided. Equipment that generates ozone, e.g. light sources and electric motors, must be kept away from the storage location. The relative air humidity should not exceed 65 %.

Further details can be taken from DIN 7716 und ISO 2230.

- 1) The values listed in the tables refer to the disc tire characteristics.
- 2) For:  $T_w = 0,2 \cdot T_{KN}$ ;  $T = 0,8 \cdot T_{KN}$ ;  $f = 10$  Hz;  $\vartheta = 30^\circ\text{C}$
- 3) This value must be reduced by the temperature factor when the coupling temperatures are higher than  $30^\circ\text{C}$ .

- 4) Tolerances on the materials may be as high as  $\pm 15\%$ .
- 5)  $P_{KV 60}$  value represents the damping power that can be absorbed over a period of 60 minutes. The damping power that can be absorbed permanently is  $P_{KV \infty} = 0,5 \cdot P_{KV 60}$ .

# Highly flexible Stromag Periflex® VN Disc Coupling

## Stromag Periflex® VN coupling characteristics

<b><math>T_{KN}</math></b>	
The coupling's nominal torque can be permanently transferred over the whole permitted speed range. It must be higher than the system's nominal torque $T_N$	$T_{KN} \geq T_N$
An application factor of 1.2 is recommended for the simple design of a drive system based exclusively on the nominal torque.	$T_{KN} \geq T_N \cdot 1,2$
<b><math>T_{Kmax}</math></b>	
The coupling's max torque $T_{Kmax}$ can be endured as a peak load and may not be exceeded by peak torques $T_{max1}$ when the system is operating in normal, nonstationary mode. A system's normal nonstationary modes are unavoidable and occur repeatedly (e.g. starting/stopping, resonance passes, switchovers, accelerations, etc.).	$T_{Kmax} \geq T_{max1}$
Overloading the Stromag Periflex® VN coupling with peak torques $T_{max2}$ in a system's anomalous nonstationary mode shortens the service life and is tolerated in individual cases. A system's anomalous nonstationary modes are avoidable and are not part of the planned operating scheme (e.g. emergency stops, sync failure, short circuits, etc.).	$T_{Kmax} \cdot 1,5 \geq T_{max2}$
<b><math>T_{Kw}</math></b>	
The admissible permanent alternating torque describes the amplitude of the max permanent periodic torque fluctuation. This torque may be superimposed on a base load equal to $T_{KN}$ . This requires in addition an analysis of the max damping power $P_{Kv}$ .	
<b><math>\Delta K_a</math></b>	
Max axial displacement of the coupling. The shafts' axial displacement $\Delta W_a$ must be less than $\Delta K_a$ . The axial displacement for Stromag Periflex® VN couplings depends on the installed connection ring. The disc tire must always lie over its full width in the connection ring.	$\Delta K_a \geq \Delta W_a$
<b><math>\Delta K_r</math></b>	
Max radial displacement of the coupling. The shafts' radial displacement $\Delta W_r$ must be less than $\Delta K_r$ .	$\Delta K_r \geq \Delta W_r$
<b><math>\Delta K_w</math></b>	
Max angular displacement of the coupling. The shafts' angular displacement $\Delta W_w$ must be less than $\Delta K_w$ . A $\Delta_{kw}$ value of $0.5^\circ$ is permitted for Periflex® VN couplings. This value, however, may be utilised to the full only when there are no other options for shaft displacement.	$\Delta K_w \geq \Delta W_w$

# Highly flexible Stromag Periflex® VN Disc Coupling

## Stromag Periflex® VN coupling characteristics

<b>C<sub>a</sub></b>	
<p>The axial spring stiffness represents the ratio of axial reaction force to axial displacement.</p> <p>Stromag Periflex® VN couplings do not generate axial forces when the disc tire lies over its full width in the connection ring.</p>	$C_a = 0$
<b>C<sub>r</sub></b>	
<p>The radial stiffness represents the ratio of radial reaction force to radial displacement.</p> <p>The specified values apply to the coupling at operating temperature, with a surface temperature of about 30°C.</p>	
<b>C<sub>Tdyn</sub></b>	
<p>The dynamic torsional spring stiffness represents the ratio of torque amplitude to torque angle during an oscillation.</p> <p>The torque amplitude is superimposed on an initial load (coupling torque). The Stromag Periflex® VN coupling's C<sub>Tdyn</sub> value remains constant over the coupling torque (linear characteristic curve), but changes with the amplitude, frequency, and temperature of the flexible element.</p> <p>The specified nominal values for C<sub>Tdyn</sub> are based on a coupling torque of 0.8 • T<sub>KN'</sub>, an alternating torque of 0.2 • T<sub>KN'</sub>, and a frequency of 10 Hz on a coupling at operating temperature, with a surface temperature of about 30°C.</p>	$C_{Tdyn} = \frac{T_{el}}{\varphi_w}$
<p><b>C<sub>Tdyn warm</sub></b> takes into account that high power dissipation causes the coupling to heat up.</p>	$C_{Tdyn\ warm} = 0,7 \cdot C_{Tdyn}$
<p><b>C<sub>Tdyn A</sub></b> takes into account the effects of a small alternating torque amplitude.</p>	$C_{Tdyn\ A} = 1,35 \cdot C_{Tdyn}$
<p>Calculations of torsional vibrations in the system are recommended to include C<sub>Tdyn warm</sub> (0,7), und C<sub>Tdyn A</sub> (1,35)</p>
