

THE NEXEN ADVANTAGE

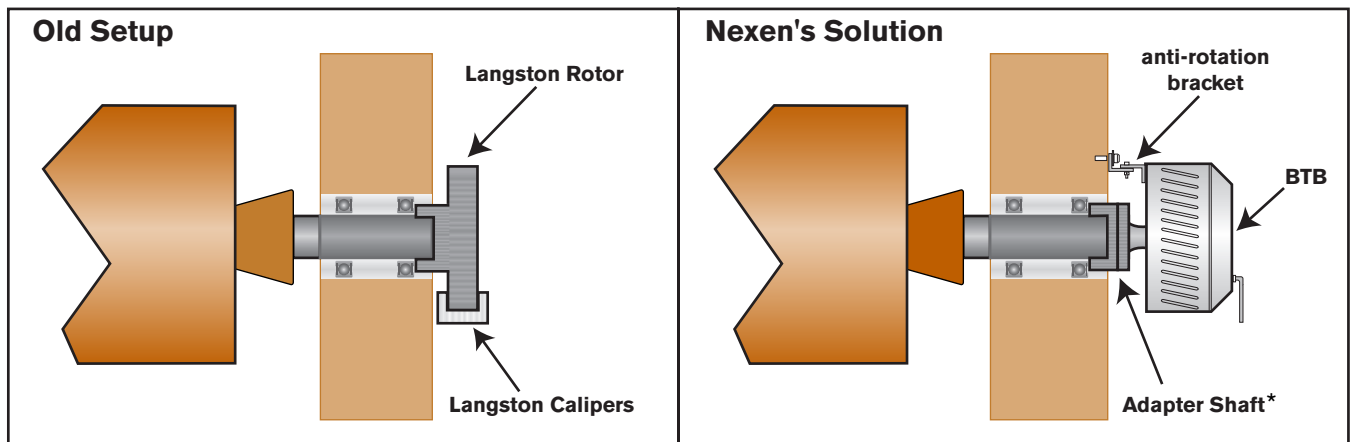

BTB Brakes on Langston Unwind Stands

Application Unwind Stand: A device used to dispense roll stock

Customer's Problem A corrugated board manufacturer was frustrated with brake maintenance on their Langston unwind stands. The rotor-caliper brake combination used on the unwind stands caused frequent and time consuming repairs. The customer also complained of heat and noise in the operating area.

Nexen's Solution The new BTB-12 Tension Control Brake was the answer to the customer's problems. Nexen developed a retrofit kit using an adapter shaft to simplify the process of replacing the Langston rotor and caliper. This new setup has dramatically decreased maintenance frequency and noise pollution. The BTB provides the perfect tension while the **integral fan** eliminates a significant amount of heat in the operating area.

Nexen's Advantage *Performance and ease!* Nexen's BTB-10 & -12 brakes were designed with ease of maintenance in mind. They combine reliable performance with a simple design. The built-in fan ensures optimal heat dissipation away from the machine. When maintenance is needed, the **quick change friction facings** are easily replaced with virtually no down time. BTB brakes will mount on the shaft of most unwind stands.

* For the Langston model #380 unwind stand: Use Nexen P/N 927504.
